"Treatment of Gonorrhoea with Trioleandomycine (TAO)."

Warsaw, Polski Tygodnik Lekarski, Vol 18, No 12, 18 Mar 63, pp 439-440.

Abstract: [Authors' English summary] The report deals with results of TAO treatment of gonorrhea of 24 men and 10 women. The daily dose was 1--2 grams for 4--6 days. Complete cure was achieved in 32 cases, no gonococci were found in the smears, and clinical signs disappeared after 24 hours. No side effects were observed. The authors consider TAO the choice drug for treatment of gonorrhea. There are one French and one English references.

TITLE: Measuring the frequency of natural vibrations of structures ¹⁶

SOURCE: Izmeritel'naya tekhnika, no. 3, 1966, 38-41 ^{9m}

TOPIC TAGS: mechanical vibration, frequency measurement

ABSTRACT: In measuring the natural frequency of mechanical vibrations of a structure (specimen or construction part) by application of a shock, the frequency meter (elastometer, Jung-modulus meter, hardness meter, etc.) records a curve consisting of three parts: (a) forced vibrations, (b) transient process, and (c) natural vibrations. The time of forced vibrations T_f is known. This time plus the transient time must be excluded from the result of measurement. The present

ACC NR: AP6914225

0
article presents a method for determining the transient time for a system with a single degree of freedom, for various ratios T_f/T_n , where T_n is the time of natural vibrations. Starting from a forced-oscillation equation, the method yields simple formulas for the phase angle which single-valuedly determines the transient time. The method permits determining the required duration of application of the external force. Orig. art. has: 2 figures and 27 formulas.

Čogošvili, G. S. On the fundamental homomorphisms of duality. Akad. Nauk Gruzin. SSR. Trudy Mat. Inst. Razmadze 18, 1-52 (1951). (Russian. Georgian summary)

The author develops another extension of the Alexander-Kolmogorov duality theory [see these Rev. 12, 846 for an earlier generalization as well as references to previous work by the author, by Alexandrov, and by Kaplan]. Here, certain natural homomorphisms of homology groups of an "admissible subset" A of a space R into the groups of the complementary subset $B = R - A$ are no longer necessarily isomorphisms. However, the homomorphisms are "good enough so that some properties of B can be deduced from the structure of A ." Furthermore, when R has the appropriate properties and A is a closed subset of R , the homomorphisms become the isomorphisms of the Alexander-Kolmogorov theory.

Two general situations are encompassed. Either the space R is normal and A is closed or R is completely normal and conditions on A are "relaxed" a little. Thus, A is to be "bicomactly immersed" in R and its frontier a (points of A not inner-points of A) is to be of the type of a difference of two closed sets. The second condition is equivalent to the existence of an open set O in R such that $a \subset O$ and a is closed in O . Then O is called a "neighborhood of closedness" for the set a . The first condition means that if U is any relatively open subset of A whose closure is bicomact, then there is an open V in R whose closure is bicomact and such that $U = V \cap A$.

The author uses many classes of "inner" and "outer" cycles and cocycles, defined by coverings of Alexandrov types for the sets A and B , as well as for associated sets a (frontier), \bar{A} (the closure), and B , the inner-points of B . The principal new results concern the existence and nature of homomorphic maps of homology groups based on these classes of cycles.

L. Zippin (Flushing, N. Y.).

CHOGOSHVILI, G. S.

Chogoshvili, G. S. On the application of direct spectra of bicomplex groups in homology theory. : Soobšč. Akad. Nauk Gruzin. SSR 15 (1954), 655-662. (Russian)

The author introduces several new homology and cohomology groups, associated with a pair (R, M) , R locally compact normal, M a subset of R , by a limit construction. Let X be a discrete (abelian) group and θ its character group. Then $\nabla_I'(M, R; X)$ is the limit group of the inverse system, whose generic group is, for any F (closed in R , contained in M), the factor group $H^*(F; X) = H^*(R; X)$ (cohomology group of F modulo the image of the cohomology group of X under restriction to F), with the homomorphisms defined in the obvious fashion. One also defines $\Delta_E'(M, R; \theta)$ as the limit of the direct system, formed by the kernels of the injection of the homology groups of the same sets F as above into R ; the groups are compact, and the limit is understood in the author's sense [Mat. Sb. N.S. 28(70) (1951), 89-118; MR 12, 846]. The two groups obtained are dual, in the author's sense. A similar pair of groups (∇_E' and Δ_I') is defined by considering the directed set of open sets of R , containing M . If N is the complement of M in R , it is shown that

$$\nabla_I'(M, R; X) \approx \nabla_E'^{+1}(N, R; X),$$

$$\Delta_E'(M, R; \theta) \approx \Delta_I'^{+1}(N, R; \theta).$$

1
1 = F/W

COEDS VII. 1. 5.5.

This generalizes known duality laws for closed sets [e.g., P. S. Aleksandrov, *Izv. Akad. Nauk SSSR. Ser. Mat.* 6 (1942), 227-282; MR 4, 249]. The second part considers spectral-singular homology groups, as discussed by Hurewicz, Dugundji, and Dowker [*Ann. of Math.* (2) 49 (1948), 391-406; MR 9, 606] and the author [*Sobšč. Akad. Nauk Gruz. SSR* 14 (1953), 583-588; MR 16, 389]. A boundary operator is defined from the relative groups to those of the subset; it is stated and partially proved that the Eilenberg-Steenrod axioms hold.

H. Samelson (Ann Arbor, Mich.).

"Generalized Products and Limits and Their Applications in Homology Theory"

Moscow, Uspekhi Matematicheskikh Nauk, No. 4, Vol. 21, 1966, pp 23-34

Abstract: This paper is derived from a review given at the IVth All-Union Topological Conference in September 1963, in Tashkent.

Three characteristic properties of the Tikhonov topology, commonly used in products of topological spaces, are defined. The explicit form of these topological spaces is defined. The explicit form of this topology is governed by the generators of open sets. The cited properties ensure the existence of other remarkable properties and exceptionally broad applicability of the Tikhonov product topology.

It is shown that a non-Tikhonov topology of a given system may be larger, smaller, or not comparable to the Tikhonov topology, and each case is discussed. The author then examines problems involved in obtaining sums of topological (compact) groups. Particular definitions made are applicable to various problems in the theory of homologies. In this context, spectral theory is ill-named because it applies to the greatest variety of homological groups.

The relations between various homological groups are established.

TITLE: A ferrite-phototransistor scheme for converting continuous values to discrete values

SOURCE: AN GruzSSR. Soobshcheniya, v. 34, no. 3, 1964, 629-632

TOPIC TAGS: control system, phototransistor, encoding, computer, D 7 diodes, P 3
FD 1 photodiode, FD 2 photodiode, FD 3 photodiode, semi-conducting device,
ferrite core

The principles of the authors' scheme are based on the use of a ferrite core
without physical representation of the code, as described by M. I. Adzharov
and P. P. Vateley, Radiotekhnika i Elektronika, 1964, No. 9, pp. 1500-1501.

1 on the enclosure. The light source is set up on the measuring indicator, and
control is established at three points. Photodiodes are placed on the instrument
scale, and these are lighted up alternately according to movement of the indicator

ACCESSION NR: APh040899

in conjunction with the light sources. Two sensing elements are provided at each point, one for recording, the other for resetting. When the indicator moves

position of the first digit is reset and the code 10 (third decimal place) is entered

ment for this converter were effected at the Problemnaya laboratoriya avtomatiki i vychislitel'noy tekhniki Gruzinskogo politekhnicheskogo instituta im. V. I. Lenina

AUTHOR: Chogovadze, G.I., Head of the Council of National Economy
of the Georgian SSR

TITLE: Perspectives in the Development of Power Engineering in the
Georgian SSR (Perspektivy razvitiya energetiki Gruzinskoy SSR)

PERIODICAL: Gidrotekhnicheskoye Stroitel'stvo, 1958, Nr 5, pp 8-12 (USSR)

ABSTRACT: Georgian electric power production exceeds by 120 times that
of 1913. The future development of industry and agriculture,
and in particular the exploitation of the various mineral
resources (Manganese, coal, etc) depends mainly on the growth
of electric power. Basic power resources consist mainly of
water power: 89% of all available power resources in the republic.
The potential power of the Georgian rivers is estimated to
be 11 million kw and according to data recently published by
the Energeticheskiy institut AN Gruzinskoy SSR (Power Institute
of the AS of the Georgian SSR) this figure has been increased
by 30%. In 1927 the Zemo-Avchal'skaya gidroelektrostantsiya
imeni V.I. Lenina (Zemo-Avchala Hydroelectric Power Plant
imeni V.I. Lenin) was one of the first in the USSR to start
production. During the following years, the following
GESes were constructed: the Rionskaya GES imeni I.V. Stalina

Card 1/

Respectives in the Development of Power Engineering in the Georgian SSR

(Rioni GES imeni I.V. Stalin), Adzhari-Tskal'skaya (Adzhari-Tskali), Sukhumsкая (Sukhumi), Chitakhevskaya (Chitayevskaya) and the regulating hydroelectric power stations were as follows: Khramskaya 1 (Khrami 1), Shaorskaya (Shaorskaya), Tkibul'skaya (Tkibul) and others. At present the following hydroelectric power plants are under construction: Khramskaya 2 (Khrami 2), Ladzhanurskaya (Ladzhanur) and Gumatskiye (Gumati). On the river Ladzhanuri, the first arch dam (75 m high) is under construction. Electric power available at the present time is still insufficient. As a result, the Chiatur'skiye margantsevyye rudniki (Chiatura Manganese Mines) produce several million tons of manganese ore per year, but the Zestafonskiy ferrosplavnyy zavod (Zestafoni Ferroalloy Plant) can process only an insignificant part of it; the remaining ore has to be transported either to remote districts of the USSR or exported. To satisfy the growing needs for electric power, Georgia plans to operate electric power stations with gas. The construction of a gas pipeline from Karadag to Tbilisi has been started and will be completed by the end of 1959. The construction of the

Card 2/3

98-58-5-2/33

Respectives in the Development of Power Engineering in the Georgian SSR

projected hydroelectric power plant on the river Inguri has become an urgent necessity; it should be ready by 1966. The amalgamation of the Transcaucasian (Zakavkaz) electric power systems in accordance with the decisions of the 20th KPSS Conference has already begun. A 110 kv line between Mingechaur and Tbilisi has been constructed. Another 220 kv line from Kirovobad via Akstafa to Tbilisi is under construction and in the near future a line will be built to the Armenia SSR in order to unite the Armenian power system with those of the Azerbaydzhan and Georgian SSR.

Role of the aglucon fraction of dyes and tanning materials in the wine-maturing process. Sh.K. Chogovadze (Leningrad. Inst. Sovet. Torgovli Im. Bagci'sa). *Vino delie i Vinogradarstvo S.S.R.* 2, No. 6, 14-17(1948).—On removal of the aglucon (I) fraction, O absorption ceases in the wine; further, Fe ions do not catalyze O absorption without I present. On storing white or red wine at high temps. the amt. of I formed increases markedly; this I comes not only from the husks but from hydrolysis of tannins and coloring matter. Leuco compds. exist in colorless juices which go over to the keto form on heating; this accounts for increase in I fraction in wine after pasteurization. High fermentation temp. also gives larger amts. of I in the wine. H. Oatfield

in the case of the RAN/sample was without noted effect
on the O absorption in the presence of H₂O.

EXCERPTA MEDICA Sec 10 vol 12, Obstetrics

1155. OXYTIC PROPERTIES OF THE BLOOD SERUM DURING LABOUR AND IN NEWBORNS - Właściwości oasytotyczne surowicy krwi kobiet rodzących i noworodków - Chojęcka B., Kurzepa S. and Lesiński J. Działu Matki i Zaki. Farmakol., Inst. Matki i Dziecka, Warszawa - POL. TYG. LEK. 1958, 13/48 (1937-1938) Tables 1

The authors determined the oxytotic properties of the blood serum by De Jalon's method. Bayo and De Jalon found in 10 parturients and in the newborns a certain regularity in the behaviour of oxytotic substances during labour. Investigations showed that the level of oxytotic substances in the uterine blood serum and in the umbilical blood serum is almost equal and that it is distinctly higher than their level in the peripheral blood of the mother.

"5-Hydroxy-Indole-Acetic Acid Excretion of Maternity Patients Unprepared and Prepared by Psychoprophylactic Methods."

Budapest, Orvosi Hetilap, Vol 103, No 46, 18 Nov 62, pages 2175-2177.

Abstract: [Authors' summary] Psychoprophylactic preparation, by its effect on the central nervous system, resulted in a change in serotonin metabolism. It seemed that the excretion of 5-HIA was proportional to the success of the psychoprophylactic preparation. Post partum, there was no significant difference between the 5-HIA values of the prepared and control patients. Determination of 5-HIA excretion can be used for the evaluation of success of the psychoprophylactic preparation.
